

1) In Customers, we set the CustomerID just being a PK attribute instead of an FK.

2) In Product, we set the ProductID just being a PK attribute instead of an FK.

3) We removed the relationship between Product and Category and connected Product and Category via Subcategory. At the same time, we also removed ProductID from Category.

4) For the relationship between the Subcategory and Product, we removed ProductID from Subcategory. we set the ProductCategoryID just being an FK attribute instead of a PK.
